Why Use Liquidity Pools?

Liquidity Providers in StellarX earn a *0.3% fee Rewards* on all trades proportional to their share of the pool. Fees are added to the pool and are accumulated in real-time. Fees can be claimed by withdrawing your liquidity. You can easily set up the same pair again whenever you wish. All pairings will not show up in the available list, if there has been a pairing created previously, yours will be added to it.

Tips Before Getting Started

Have your Lobstr account open to the Settings, Walletconnect page, this seems to make the setup connection more seamless.

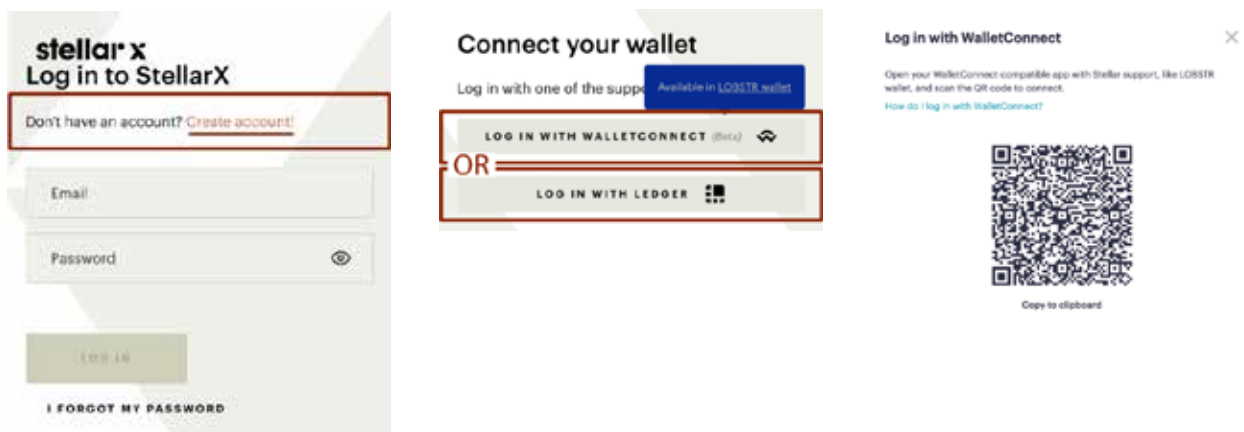

Liquidity pairing is a term you may see in the Chat; it simply means the two tokens you are pairing when setting up your LP. Keep in mind the order you add your LP pairs is the order AMM trading will happen.

Not all pairs will show a \$ value amount in your list, this is normal and is not indicative of no value. You may also see the token inventory fluctuate, StellarX pulls numbers from the exact exchange rate in real-time as it creates payment pathways which affects the numbers you see.

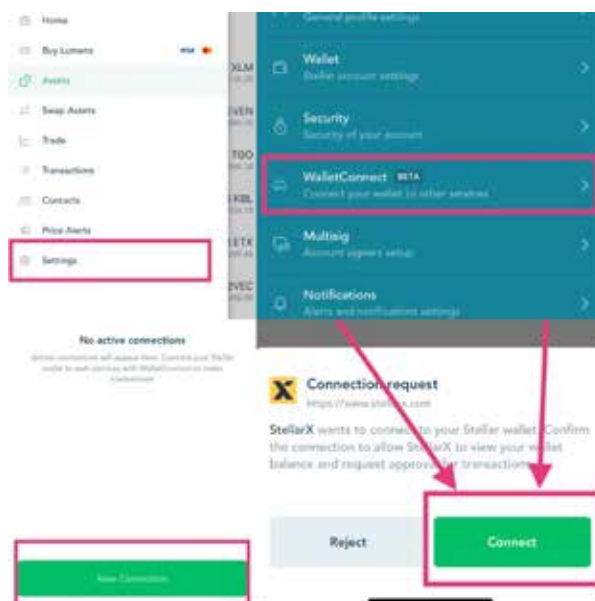

Logging into StellarX.com & Connecting Your Wallet

You will need to create a StellarX.com account.

Once you have your account created you will be able to connect your StellarX account to your Lobstr Wallet or your Ledger Nano.

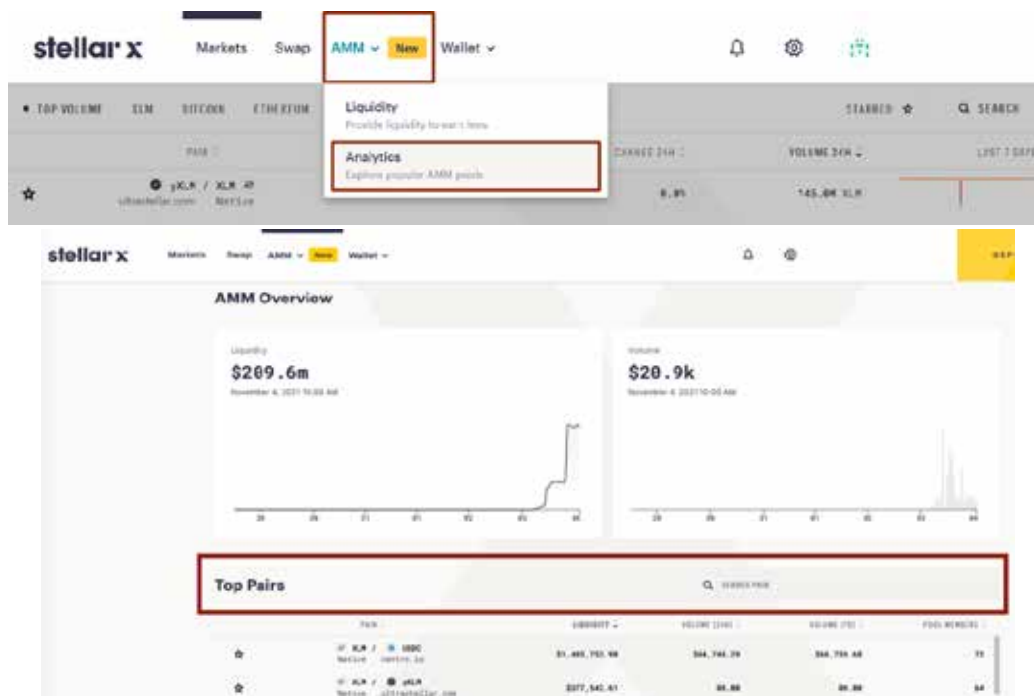

You can also connect your using WalletConnect from within your Lobstr account. Select: Settings, WalletConnect, Scan the QR code, Connect

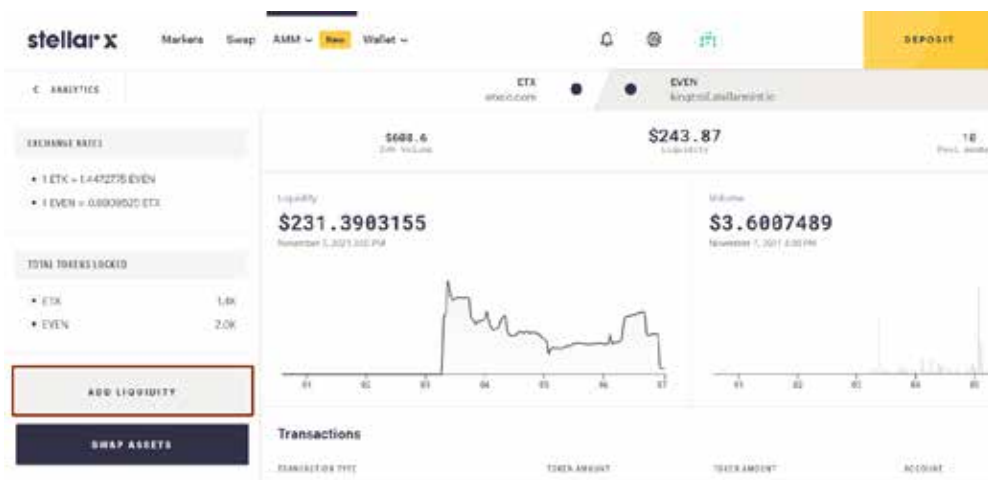

Note: to confirm all transactions done through WalletConnect (you must come back to this screen each time or StellarX, NiceTrade, etc. will still be waiting for your approval)

How to Find and Join the Top Liquidity Pools

From your StellarX account go to AMM at the top of the screen and select Analytics, from the drop-down menu. Search for the top Liquidity Pools using either the search querybox or filters.

Once you have found the Liquidity Pool you wish to join, click on the pairing, and go to Add Liquidity.

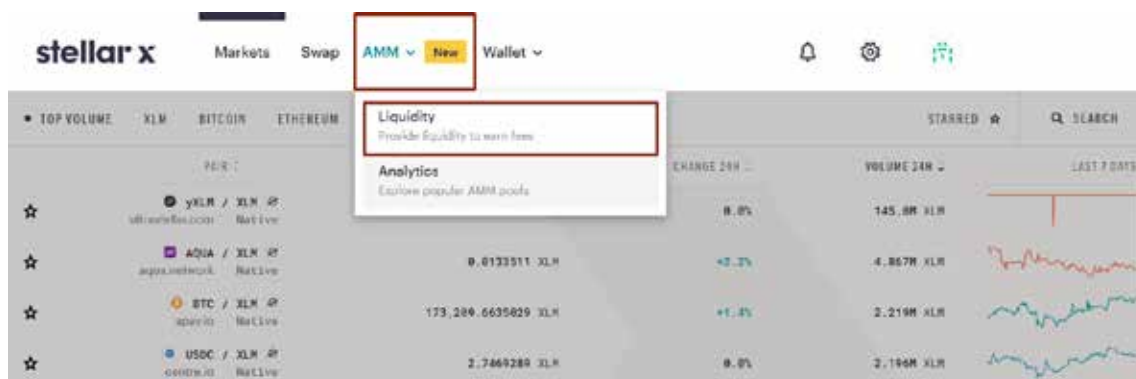

Note: If you are unable to find the pairing you are looking for it may be due to this >>> Liquidity Pools using non-verified Stellar asset pairs will only remain in the displayed listings for 24hr after being created. You can still add your funds to an existing liquidity pool, simply add the assets you wish; if there has already been a pairing created your listing will be added to the existing liquidity pool.

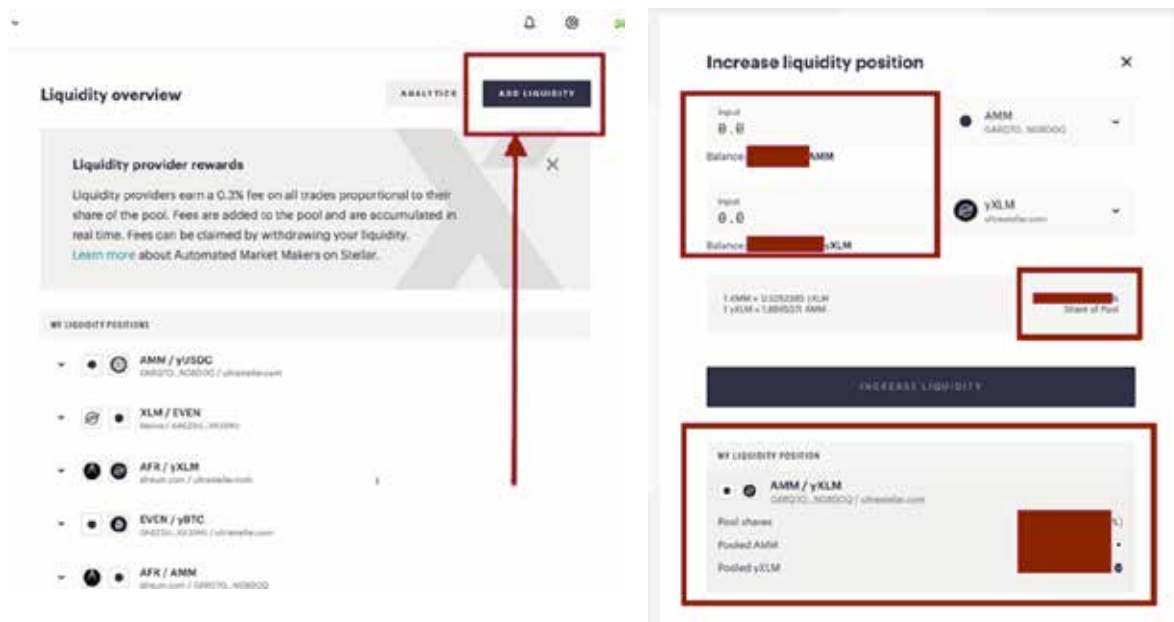

You may want to “favorite” the pairings you are working with for easier retrieval later.

How to Create a New Liquidity Pool

If you wish to create a new pool, click on the AMM at the top and select Liquidity.

It will then give you the option to Add Liquidity as well as review any existing Liquidity Pools you have already joined.

To create the Liquidity Pool, select the 2 assets you wish to pair. You can only contribute up to the minimum denominator of what you have of BOTH assets.

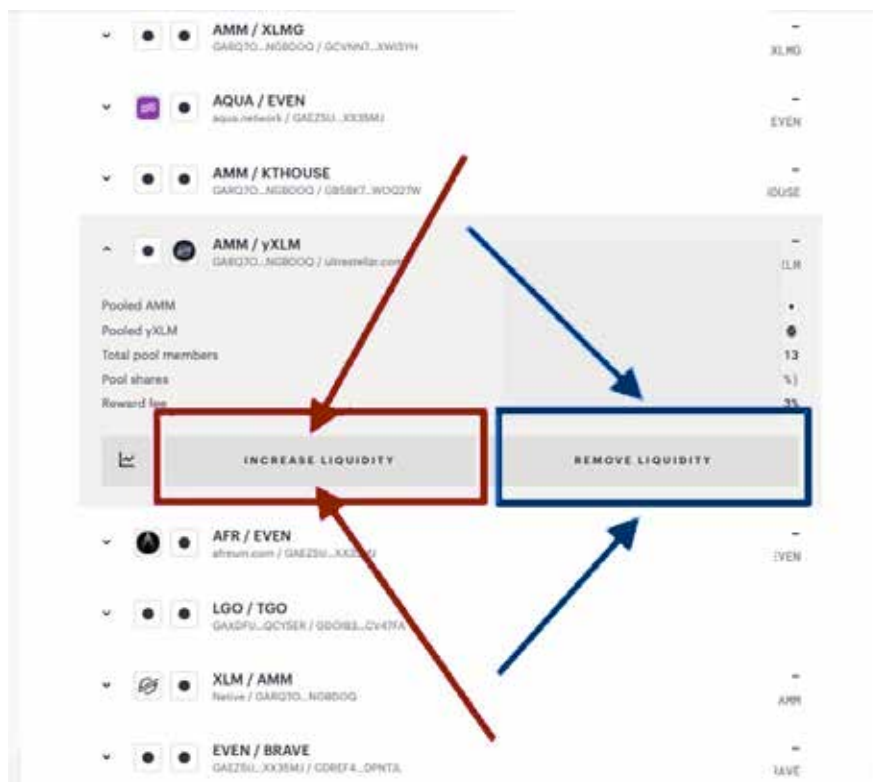

Example: If you have 1 AMM and 1000 yXLM, you can only contribute the equivalent of 1 AMM and 1 AMM's worth of yXLM.

After you have input the numbers, the calculator will tell you how many Pool Shares you have purchased, your % of the Pool Share that you will earn, and the number of assets you have added to the pool.

Note: remember should this Liquidity Pool already exist your entries will be added to the existing pool.

How to Adjust Your Liquidity Pools

If you wish to adjust your contribution, whether that means adding more assets to increase your Pool Share or to withdraw from the Pool (aka to liquidate and take profit) select the Liquidity Pool and follow the prompts.

Remember: the only way to take profit is to withdraw or liquidate a portion of your assets from the Liquidity Pool. Withdrawals can be made in increments of 25, 50, 75, or 100%.
