## What is PapayaBot? & How do I use it?

In this guide

- ⨉ Getting Started
- ⨉ Quick Commands
- ⨉ Setting Up Your Tip Wallet
- ⨉ Funding your PapayaBot Tip Wallet [Lobstr]
- ⨉ Sending funds back to your Wallet [Lobstr]
- ⨉ How to Tip a User

Getting Started

PapayaBot is a Telegram Account that functions as a Tip Wallet. You can give "tips" to people, who help you, or that write info you like. The potential is yet untapped for us as users in Telegram.

You can also receive "tips" from other users once you have set up your own PapayaBot Wallet.

Keep in mind, that you can only send coins or tokens that are in the PapayaBot system. To see a full list of coins or tokens available click the button with (3 dots)

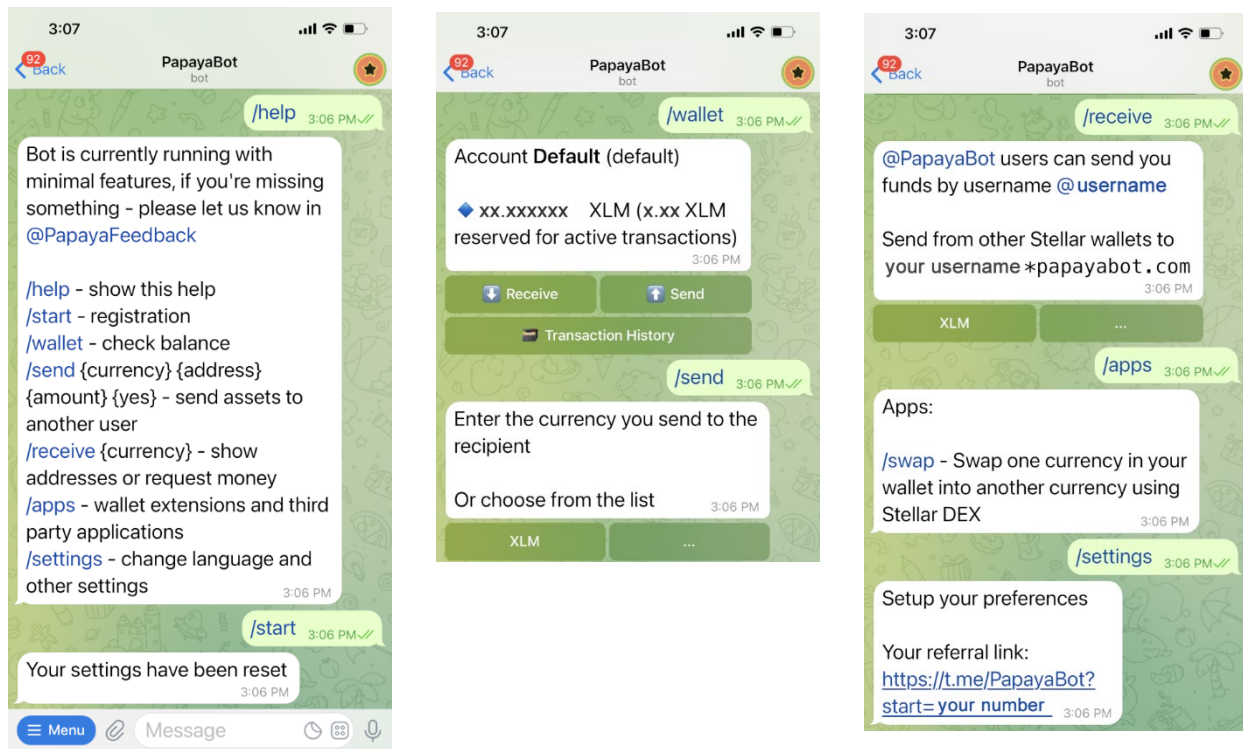

Note: This is an example of coin or tokens listed it Is not a full list.

⚠️ ⚠️ **Not Financial Advice – Just Friendly Helpful Information** ⚠️ ⚠️
⚠️ ⚠️ **We Always Recommend You DYOR (Do Your Own Research)** ⚠️ ⚠️

Note: Screenshots in this tutorial are from an iPhone, your screen may look slightly different. You can also type /help in the PapayaBot chat window anytime to bring up more information.

Quick Commands

These are quick commands to access features of PapayaBot Wallet.

You can bring up this menu by typing /help at any time in the PapayaBot chat. You can also click the pop-up menu which is brought up by tapping on the Menu (3 lines) next to the message box.
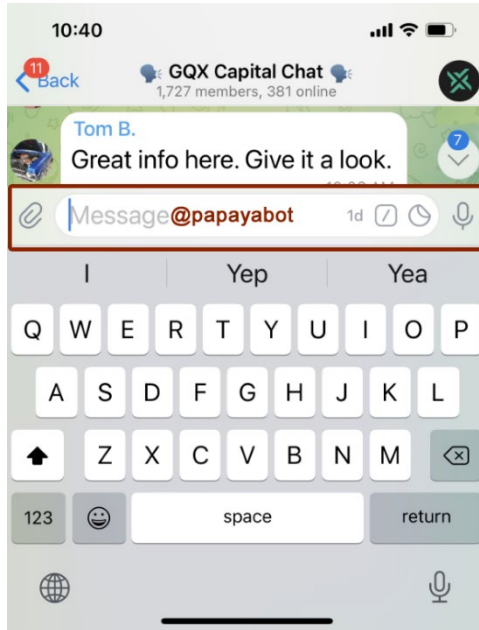

The default user interface should look like the images above. You can click on any link and PapayaBot will respond accordingly, guiding you to the next step.

It is important to note that you cannot Tip a user from here. Tips are given or received in Group or Private chats only.

You can, however, send and receive funds to and from a Stellar address, such as your Public Lobstr Address.
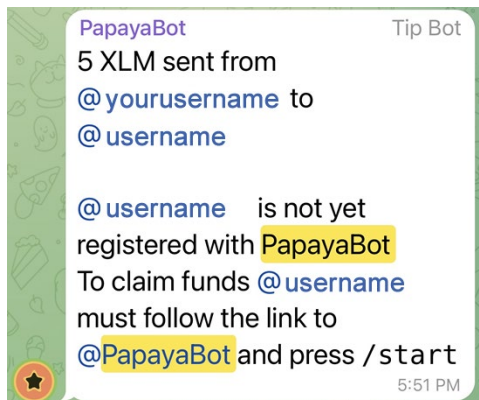

Setting Up Your Tip Wallet

To setup your Tip Wallet simply send a message to @PapayBot username or type http://t.me/PapayaBot in the message window.

Note: If you get this window 👆👆 click the to bring up the Bot. Then type /start (you may also have a start button at the bottom of your screen).
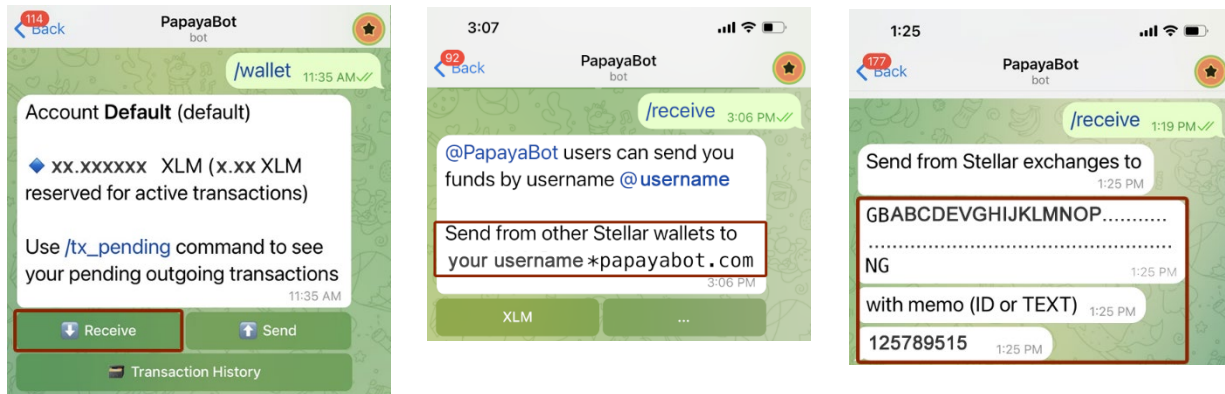

If you receive a tip from another user prior to setting up your account, you will see this message in the channel feed immediately after their /tip message.

Simply follow the instructions provided by the Bot to setup your account and collect any tips that have been sent to you.

Funding your PapayaBot Tip Wallet

This is where you find Wallet features to Send, Receive, and view previous transactions. You can use buttons within the /wallet or directly from the menu by typing direct commands /wallet /receive or /send.

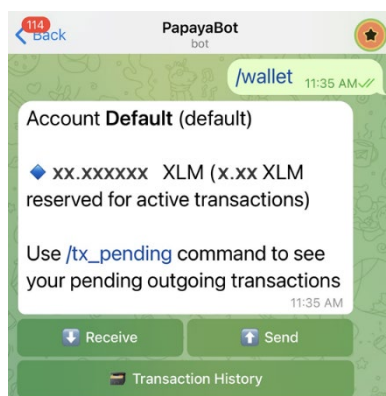

This displays your username that other users will use to send you Tips. It also displays your PapayaBot Public Address that can be used to fund your PapayaBot Tip Wallet.

For the purpose of this tutorial, we will select XLM to fund your wallet. You will now copy and paste Your Wallet address AND the Memo a.k.a. Destination Tag into Lobstr along with the amount of XLM you want, to have on hand, to Tip other users.

Once you have sent the funds from Lobstr, you should receive an alert notification indicating your PapayaBot Wallet has received funds.

Your PapayaBot Wallet should now show the funds you sent in a screen like the one below.

Sending funds back to your Wallet

Sending funds from your PapayaBot Wallet to your main Wallet [Lobstr] is very similar and will start by selecting the Send button from the /wallet screen or directly by using the /send command.

PapayaBot will respond with this screen.

In this example, we are going to use XLM to send back to your main Wallet [Lobstr]. Click XLM from the should you want to send another coin or token select the … from the menu.

Once you select XLM you will see the next screen.

Here you will copy and paste your Public Wallet [Lobstr] address then send.

PapayaBot will respond asking for a Memo; this is not required so you can input whatever you like and send.

PapayaBot should reply stating funds have been sent to your main Wallet.

In a few moments you should receive an alert notification from your main Wallet [Lobstr] indicating you have received the funds. Check your main Wallet to confirm the funds have been deposited correctly.

Your PapayaBot Tip Wallet will should reflect the total remaining XLM in your account.
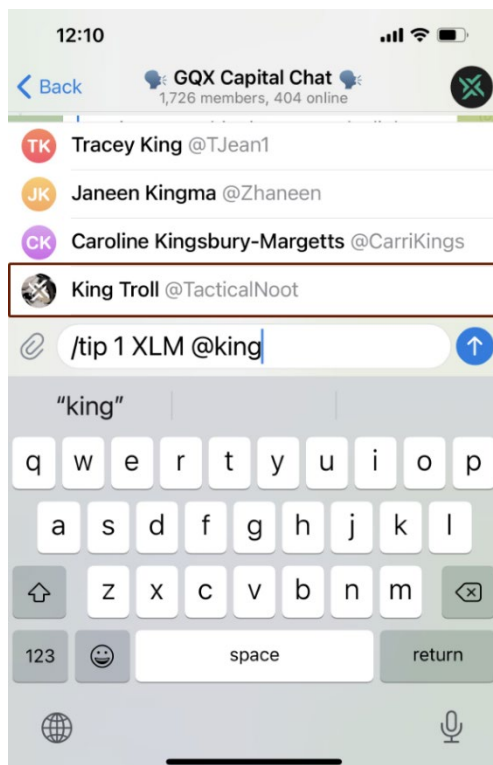

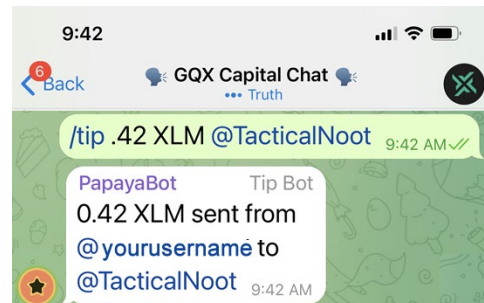

How to Tip a User

Tipping another User is very simple. Use the following command from within PapayaBot, GQX Channels, or any channel that has PapayaBot installed.

/tip 1 XLM @username
(/tip command + Amount You Want to Send + @Username of the Person)

Note! The Crypto Asset Name needs to be entered in "ALL CAPS"

In this example you can see 1 XLM sent to King Troll from Sarah Bradlee Fulton. If you don't see the PapayaBot return message then the "tip" did not send properly, check your syntax against what is listed in the image below.

To find a specific user, type @ and begin typing their name. You will see names start appearing above the message box. By selecting the correct user, you can then auto-fill the last portion of the command sequence.

Hitting Send will execute the command for PapayaBot to initiate your Tip request.

That's all there is to it!
